Highlights

- **The only designer and product person on Hear**, from zero to a growing product.
- **Hear Design Lab, my own initiative**: design directions tested in working code.
- **An app with 100 million downloads** at Tap Mobile: A/B tests led the design.

Experience

UX/UI designer, Intune

May 2023 to present · Tel Aviv

- Design and define Hear, the AI contact-center platform Intune pivoted to, end to end: the brand from zero, the product from definition to UI, and the new website.
- Design Hear's monitoring and analytics screens: a topics view, a compliance heatmap, agent evaluation with Ask AI, and an actions board that turns findings into tracked work.
- Built Hear Design Lab from scratch on my own initiative: a working copy of the platform in React, coded with Claude Code and connected to an AI API for real answers, to test design directions for different customer types, with several versions of key screens a click apart.
- Design and document the design system in Storybook: semantic tokens and components for light and dark modes, and for Hebrew, right to left.
- Ship front-end code to Hear's product through pull requests, with the developers.

User experience designer, Tap Mobile

June 2022 to May 2023 · Be'er Sheva

- Worked on a consumer app with 100 million downloads, where A/B tests and user behavior drove the decisions.
- Led the design of multiple apps focused on user engagement.
- Used funnel analytics with product managers and engineers to guide UX decisions.
- Designed typography, color and iconography for the apps.
- Took on product definition as well as design.

UX/UI designer, Qualish

May 2020 to December 2020 · Be'er Sheva

- Turned customer needs into wireframes, workflows and interactive prototypes.
- Worked with senior management to align UX with business goals.

User experience designer, VPlanSolutions

March 2020 to June 2020 · Tel Aviv

- Designed the company's logo and website.

Skills

All case studies at ofir1233.github.io ↗

DESIGN	Product definition, interaction design, user flows, wireframing, UI mockups, high-fidelity prototyping; data visualization; visual design (typography, color, iconography).
ENTERPRISE UX	Complex dashboards, analytics tools and monitoring interfaces; design systems, tokens and component libraries; accessibility (WCAG) and cognitive-load optimization.
RESEARCH	UX research, user testing on complex workflows, funnel analytics.
FRONT END AND AI	HTML, CSS, JavaScript, Git; Claude Code for React prototypes and Hear's front end.
TOOLS	Figma, Storybook, Adobe Creative Suite, Sketch, Principle.
