Ofir Nona

Senior product designer · enterprise AI

Tel Aviv, Israel · ofirnona123@gmail.com · linkedin.com/in/ofir-nuna-548a431a0
Portfolio · ofir1233.github.io

I design data-heavy enterprise tools: dashboards, monitoring and analytics.

The only designer and product person on Hear, from zero to a growing product.

Hear Design Lab, my own initiative: design directions tested in working code.

An app with 100 million downloads at Tap Mobile: A/B tests led the design.

EXPERIENCE

May 2023 to present
Tel Aviv

UX/UI designer, Intune

- Design and define Hear, the AI contact-centre platform Intune pivoted to, end to end: the brand from zero, the product from definition to UI, and the new website.
- Design Hear's monitoring and analytics screens: a topics view, a compliance heatmap, agent evaluation with Ask AI, and an actions board that turns findings into tracked work.
- Started Hear Design Lab on my own initiative: a working copy of the platform in React, coded with Claude Code from a colleague's starting app, to test design directions for different customer types, with several versions of key screens a click apart.
- Design and document the design system in Storybook: semantic tokens and components for light and dark modes, and for Hebrew, right to left.

June 2022 to May 2023
Be'er Sheva

User experience designer, Tap Mobile

- Worked on a consumer app with 100 million downloads, where A/B tests and user behaviour drove the decisions.
- Led the design of multiple apps focused on user engagement.
- Used funnel analytics with product managers and engineers to guide UX decisions.
- Designed typography, colour and iconography for the apps.
- Took on product definition as well as design.

May 2020 to December 2020
Be'er Sheva

UX/UI designer, Qualish

- Turned customer needs into wireframes, workflows and interactive prototypes.
- Worked with senior management to align UX with business goals.

March 2020 to June 2020
Tel Aviv

User experience designer, VPlanSolutions

- Designed the company's logo and website.

SKILLS

Design	Product definition, interaction design, user flows, wireframing, UI mockups, high-fidelity prototyping; data visualisation; visual design (typography, colour, iconography).
Enterprise UX	Complex dashboards, analytics tools and monitoring interfaces; design systems, tokens and component libraries; accessibility (WCAG) and cognitive-load optimisation.
Research	UX research, user testing on complex workflows, funnel analytics.
Front end and AI	HTML, CSS, JavaScript, Git; Claude Code as a coding assistant for React prototypes.
Tools	Figma, Storybook, Adobe Creative Suite, Sketch, Principle.
